WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut two 360 mm lengths of 40 x 40 x 4 angle; square and deburr.
Flat leg (goes on the back of the panel frame): two 6.5 mm holes,
10 mm from each end, 20 mm out from the upright leg's outer face.
Upright leg: two 10.5 mm holes, 22 mm out from the flat leg's
outer face: the pivot at mid-length (180 mm from each end) and
the tilt bolt 60 mm from the pivot toward the panel's low edge.
Left and right rails are mirror images: drill the upright legs
clamped back to back so the holes line up.
Fit: the flat legs bolt across the frame's back lip at its two long
edges, 61 to 101 mm each side of the panel's centre line; the
upright legs stand down and bolt to the outside of the cheeks.
Check: hole centres 60 and 340 mm apart, within 0.5 mm.
